Web Programming I (420-H10-HR)
Web Assignment 2 – Mobile Design

Date assigned:	Wednesday, October 8th, 2025
Date due:	**Wednesday November 5th, 2025**

Learning Objectives

Upon successful completion of this assignment, the student will be able to:

- Design for mobile and responsive web design

To do:

1. Using VS Code, clone the GitHub Classroom assignment to your OneDrive:**\420-H10\Assignments** folder

2. Create a folder inside the **420-H10-A02** directory named YourInitialYourLastName _H10A02. Copy all the folders for the website developed in the last assignment into this folder (the Word document is not necessary).

Part The First – Mobile Design

NOTE: YOU CANNOT USE ANY EXTERNAL LIBRARIES FOR THIS ASSIGNMENT.

1. Design the mobile site for your website. This will be the site used when the screen is less than 768px wide (breakpoint of 768px). This means only one media query is required for the purposes of this assignment. You only need to do the complete design for this size of screen and smaller. Your site should look good between 350px and 768px. Make use of the responsive tab in the dev tools!

2. You'll only need to focus on four key pages for this assignment. You should include links for at least five pages* in your website's navigation. For mobile users, you have the flexibility to display only the most important pages in the top navigation menu. However, your bottom navigation should include all the links, whether your users are on a mobile device or a desktop computer. When it comes to desktop displays, you'll need to show all the links in the top navigation as well.

   ** Refer to assignment #1 to see the required pages, note, it's likely that many of you will end up with at least 6 or 7 in the final assignment.*

Part The Second – Set up

1. Each page must have the same look and feel. Each page should have at least one of each (header, nav, main, footer) with only the content in the main tag changing from page to

page.

2. Set up the page you created in the last assignment to use semantic elements like nav, header, main, footer, etc. If you did not in the last assignment, you must change your navigation to a list and use list-style properties and/or display:xxx properties.

3. Set up your website to have a favicon, make sure it displays for all pages.

4. Create three other pages that will be used on this version of your mobile site. All your pages should be using the same core CSS file and have the exact same navigation. If you do have separate CSS files, they should only contain unique CSS, do not repeat CSS across files.

5. Don't be afraid to use comments in your HTML and CSS! You have one more assignment after this one, CSS can quickly become unwieldy. It sometimes makes it easier to comment on what sections you are using specific CSS for and to follow the flow of the page in your CSS.

Part The Third – Content

1. On your website's Home page, add content in a paragraph that describes: the name and major service of your company, the location, some history, service again in more detail, a summation. Be sure to check for grammar errors and spelling mistakes!

   Here's a possible idea for content:

   My company provides this service/value/thing. Located/nestled/hidden in beautiful someplace, somewhere just minutes from somewhere else. Since 1842, our cool words facility offers a cool expanded description of service/value. Our aim is to do a bunch of neat things that you'll love.

   From previous years:

   Happy Valley Kennel provides high-quality, personalized cat and dog boarding, pet grooming and playtime. Located on a beautiful 25 acre natural setting in the heart of the Chelsea, just 15 minutes from Ottawa, Happy Valley Kennel is a family run business, owned and operated by Jim and Sally Read. Built in 2000, our fully heated and air-conditioned facility offers a comfortable, safe and entertaining home away from home for your pets. Our aim is to make every pet's stay as pleasant as possible and to provide ample outdoor daily exercise and fun activities for the dogs and indoor recreation time for cats.

   Tempo Music is an exceptional music school located only minutes away from downtown Ottawa, that teaches a wide variety of instruments and activities. Since 1969, we've helped kids from the age of 5 to adults the age of 80 learn how to play Piano, guitar, Violin, how to

sing, write songs, read sheet music, and many many more! Our Goal is to provide an excellent learning environment for anyone who wants to explore their passion for music and improve on their skills.

Dreaming Spectrum is a well-known company built to meet your every need. We deliver a high-quality service, designed for the elite of today's society. Indulge in a unique travel experience and relax in one of our main destination points. We offer a wide selection of planets to travel to within our beautiful Milky Way. For generations, we have been working on this project so that everyone can now experience the wonders of space. Our highly secure shuttle will make the flight experience ideal for everyone. Our personnel will take care of the safety of everyone during the trip. During the final week of your journey, we will open the cryopods, making each passenger capable of observing our marvelous Milky Way.

2. Add two images to the content of your home page. Obviously, they must be appropriate images and relevant to your business. Make at least one of them float to the right of the paragraph (float will be covered on **Oct. 20th**). Remember you are designing mobile-first and it is a best practice in mobile design to have one column. **Include image sources in the footer.**

3. Add content to the other three pages that will be available for the mobile site. This must be relevant content to the site. Follow the principles of good design to make sure your text is formatted properly and has good contrast and design. Use the appropriate semantic elements where applicable.

   As well, use good writing practices such as avoiding long blocks of text, using headings and sub-headings, and short paragraphs. Check your spelling!!

   Eventually, you must have at least two tables on your website (one for costs and one for business hours), but this is not a requirement for this assignment. Be aware that you may have to adjust the layout of one of the pages to include a table for Assignment 3.

4. There are points for using at least 5 advanced **CSS** techniques listed below. Things considered advanced for this assignment include, but are not limited to:
   - Custom properties
   - pseudo-classes (remember, you cannot have hover on mobile)
   - pseudo-elements
   - calc(), gradients, filter(), transform, clamp()
   - Container queries
   - Flex
   - Grid
   - Good use of combinators (not including descendant combinators)
   - Position for accent elements or images
   - CSS Nesting

If CSS properties are misused or employed simplistically, they will not be taken into consideration. Using the same thing more than once only counts as one. You may comment on your code where you're using advanced CSS.

Part The Fourth – Web Deployment

1. Deploy your website to the **CSDev** server (I will walk you through the steps to achieve this in a separate document).
2. Test your website on your phone.
3. In your submitted assignment include in the README.md a link to your deployed website.

There is No Such Thing as a Small Part

1. Make sure that you do not have any embedded or inline styles on any of your pages. All styles MUST be in an external style sheet.
2. At this point, the design of your site should be pretty much set with only minor tweaking. There should be no more massive design changes. The content may change and even how the content is displayed, but the design should be stable.
3. Test your pages on Firefox and Chrome. Be sure to use the responsive tab in the design tools.
4. **Validate all your HTML, CSS, and contrast. You should only have errors if you are using container queries.**
5. All images must be sourced in the footer, if you took the images, you must source each! Be specific with your sources (i.e. a source for each image).
6. AI generators may only be used for your logo or pictures of your products. You may not use them for anything else. You must source the AI generator used.
7. Check **MS Teams** for links to sites which contain free images.
8. Format your code using the auto-formatter.

To submit

Submissions are strictly on GitHub. No Moodle submissions will be graded.

Run the following commands often in the VS Code terminal (**Ctrl +** `) to commit your changes:

```
git add .
git commit -m "your commit message"
git push
```
